

6S Global

How Secure is your Business?

There are many steps that can be taken prior to an incident occurring. We find that often companies do not have full visibility of potential vulnerabilities and risks that may be staring them in the face. People can often overlook something trivial or be swamped with work that something slips through or familiarity may be clouding their judgement.

We offer a wide range of services to assist companies and here we look at people and an overview of behavioural analysis services.

Behavioural Analysis is the scientific study of the behaviour of individuals, concerned with describing, understanding, predicting, and changing behaviour. Daily we, each, and every one of us, are confronted with human behaviour, physically as well as online. This can be an incredibly positive experience but, in some cases, unfortunately also negative.

Our behavioural services are offered at different stages of our delivery, such as our discovery process and bolted into our stakeholder analysis, or during the project as part of our review, deliverables and/or evaluation and can be combined with our social engineering.

While behavioural analysis is often not seen as part of the security review. 6S Global wants to ensure that organizations are armed with the tools and understanding of this service. This will ensure that organisations can best decide if this service is a benefit and allows them to fully understand potential vulnerabilities and how that can be best managed.

Why is our Discovery process so important?

In the worst-case scenario, imagine the problems that an investigator might have if no audit information were being collected and stored or if users could share login IDs. Prior preparation such a discovery and planning can vastly improve the likelihood of a successful investigation and can shorten the time that it takes to respond effectively to an incident.

Now imagine that the discovery process could allow you to predict possible trends...

Data (online)behaviour:

People: What do users do online to make themselves vulnerable. A comprehensive presentation for a group including personal guidance and coaching, to help people understand what individuals are doing online that makes them vulnerable.

Social Engineering such as Phishing attacks can be included from our other services

Machine learning (Artificial Intelligence): Translate Human Behaviour for/into AI utilization to better understand human data trails to create profiles that are not built on assumptions and click-facts so that they can target more accurately.

Profiling:

Detection and classification:

- ◆ *Educate yourself or your team to recognize and analyse information relevant to a person's psychological and behaviour.*
- ◆ *Characteristics. Learn to assess and predict their capabilities and possible actions in a certain situation.*
- ◆ *Become aware and learn what to say or do, as well as what not to. Prepare procedures and protocols for specific situations, such as events or locations.*
- ◆ *Profiling is a valuable skill utilized in a wide array of scenarios and environments. From events and venues to employee or suspect interviews and, more severe, insider threats. You will learn the skills to recognize questionable behaviour and to reduce risk.*

Creating behavioural profiles about suspects, criminals or modus operandi for investigation, rehabilitation, or protection purposes:

- ◆ Create a behavioural profile of a modus operandi to try to locate a person(s).
- ◆ Create a realistic "worse-case scenario" profile for personal or business risk mitigation protection purposes.
- ◆ Create a profile on a person based on interviews with the person.
- ◆ Create a psychological profile about a person based on interviews and collateral information obtained from others.

Advice & guiding services:

- ◆ Compile the appropriate questions for interrogations or interviews.
- ◆ Learn how and where to search for information about a person, event, or situation.
- ◆ Advice or guidance on how to protect yourself, your loved ones, and/or your business.
